

J. A. PLANE

This plane is a very good glider that works on most types and weights of paper with little adjustment. Works better with a little tape on the nose but can be trimmed without it. It flies better than a lot of the other planes when using 20 lb paper.

Note: Red lines are for folds, blue lines indicate existing creases, and green lines represent hidden edges.

Step 1
Fold paper in half long ways and crease. Unfold.

Step 2
Fold paper in half vertically as shown. Crease and unfold.

Step 3
Fold top corners down to meet at center. Crease and unfold.

Paper Airplane Flying Instructions
Make sure wings are level (or slightly up) and fins are straight up. Throw level at a "medium" or a "high" speed. Trim per general instructions. It may do better if nose and leading edges of wings are taped together.

Step 4
Grab Corner 1 and fold along centerline. This will stretch out the top left corner. Flatten well and grab both halves at Corner 2. Fold back towards left side along centerline. Flatten well and return upper flap to the right.

Step 5
Pick up at Point 1 and fold along Line A. This will stretch Edges 2 & 3 (hidden under flap) to meet at centerline. Flatten well.

Step 6
Fold top corners down as shown.

Step 7
Fold corner over as shown. Crease and unfold.

Step 8
Reverse fold corner and tuck in behind inner flaps.

Step 9
Repeat steps 6 thru 8 for other side.

Step 10
Turn plane over and fold plane in half.

Step 11
Fold wings over 7/8" from centerline. Fold tail 2 1/2" from bottom edge as shown. Crease and unfold. Push tail up into center of body.

Step 12
Fold fins up 7/8" from edge.

Have Fun
