

NEPTUNE FIGHTER

An interesting modification to an old classic. May be a little bit of a challenge going from one weight of paper to another but should be consistent once the right dimension is found for each paper weight.

Note: Red lines are for folds, blue lines indicate existing creases, and green lines represent hidden edges.

Step 1

Fold paper in half short ways and crease. Unfold.

Step 2

Fold top corners down to meet at center.

Paper Airplane Flying Instructions

Make sure wings are level (or slightly up) and fins are straight up. Throw level at a "medium" or a "high" speed. Trim per general instructions. It may do better if nose and leading edges of wings are taped together.

Step 3

Fold top point along Edge 1 at 3 1/4" as shown. Crease and unfold. Repeat for opposite side.

Step 4

Fold top flap down through Point 1. Verify 0.7" dimension is approximately met. **NOTE:** Different types or weights of paper require adjustment of the 3 1/4" dimension in Step 3. Try 3 1/8" fold in Step 3 or try folding Step 4 first with an over hang of .5" instead of .7" and then folding Step 3 folds through the intersection of this line and the centerline. Once the best dimension is found for your paper this plane should be a nice flier.

Step 5

Grab Point 2 and fold to centerline using existing creases and allowing Point 3 to fold across the centerline as shown. Flatten well.

Step 6

Fold Flap A to left side. Flatten well.

Step 7

Repeat Steps 5 & 6 for right side. Flatten well.

Step 8

Fold Point 4 straight up on Line 1. This will bring edges 2a, 2b, 3a, and 3b all to the centerline as shown. Flatten all creases well.

Step 9

Fold plane in half as shown.

Step 10

Fold fin down $1 \frac{1}{16}$ " from outer edge.
 Fold wing down $\frac{7}{8}$ " from centerline.
 Turn plane over and repeat for other side.
 Flatten all folds well.

*Have Fun
